

The Useful and the Beautiful.

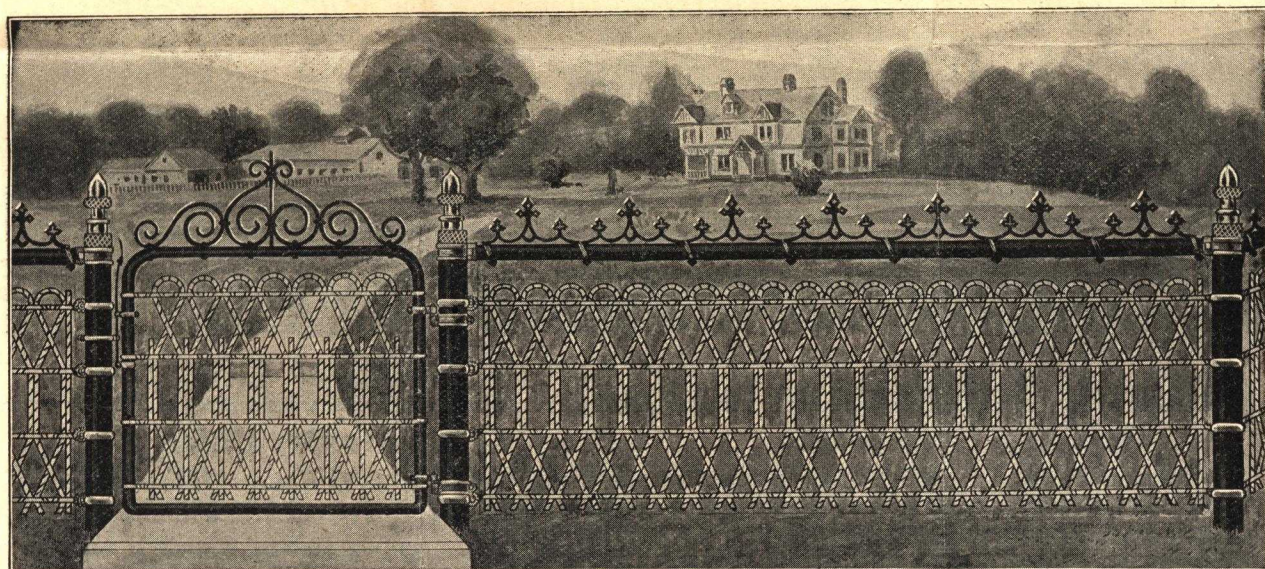

Dr. David Swing, an eminent Chicago Lecturer, was fond of the Useful and the Beautiful. So earnest was he in always combining these two virtues that he formulated a lecture in which he delighted to say that the Useful and Beautiful should always blend.

Americans are perhaps the quickest to combine these two essentials and our ability to do so has marked us as a nation of agreeable tastes.

A tight board fence, unpainted and unadorned, surrounding a palatial home might be useful, but

the selection of Ornamental Fence. A fence that is not beautiful, though useful, is at once discarded. A fence that is not useful, though beautiful, suffers a like fate. But the fence that blends these two virtues will always strongly appeal to any buyer. Therefore, the manufacturer who strives for the beautiful alone, makes a blunder as serious as he who strives for the useful without regard for the beautiful.

It is this happy combination of these essentials that has made our Ornamental Fence so eminently popular and distinctively acceptable over designs by manufacturers who have not kept these facts

NO. 2 FENCE, 38 INCHES HIGH, WITH STYLE "A" TRIMMING.

that it would lack sufficient harmony to make it beautiful goes without saying. On the contrary, a frail wicker effect might be so designed and woven into a fence that would be beautiful but wholly lacking in the matter of usefulness.

It will be readily noted that there is a constant and sometimes an unconscious tendency toward a combination of the useful with the beautiful, no matter what we are buying. In nothing is this tendency more emphatic and pronounced than in

uppermost in fence construction.

A careful examination of the illustrations shown in this circular reveals a symmetrical framework of steel tubing, with posts surmounted by appropriate ornaments, and twisted steel wire pickets compressed into beautiful designs and woven into a fabric, the whole combining the useful and beautiful with a cleverness that stamps it at once as a desirable Ornamental Fence for Lawns, Parks, and Cemeteries.

ORNAMENTAL FENCING.

Our Fence Guaranteed.

We guarantee every foot of our Ornamental Fence to be made of good material, and constructed in such splendid workmanlike manner that there is no occasion for complaint. To make matters doubly sure for you, however, we permit you to examine shipment at your railroad station, and should you be displeased in any particular you may refuse the shipment and order the same returned at our expense. In the event you accept the shipment, and erect the fence, and then do not find it as good as we represented, or if you are displeased with its appearance or construction, you may take it down and return it at our expense, and every cent of your money will be promptly returned.

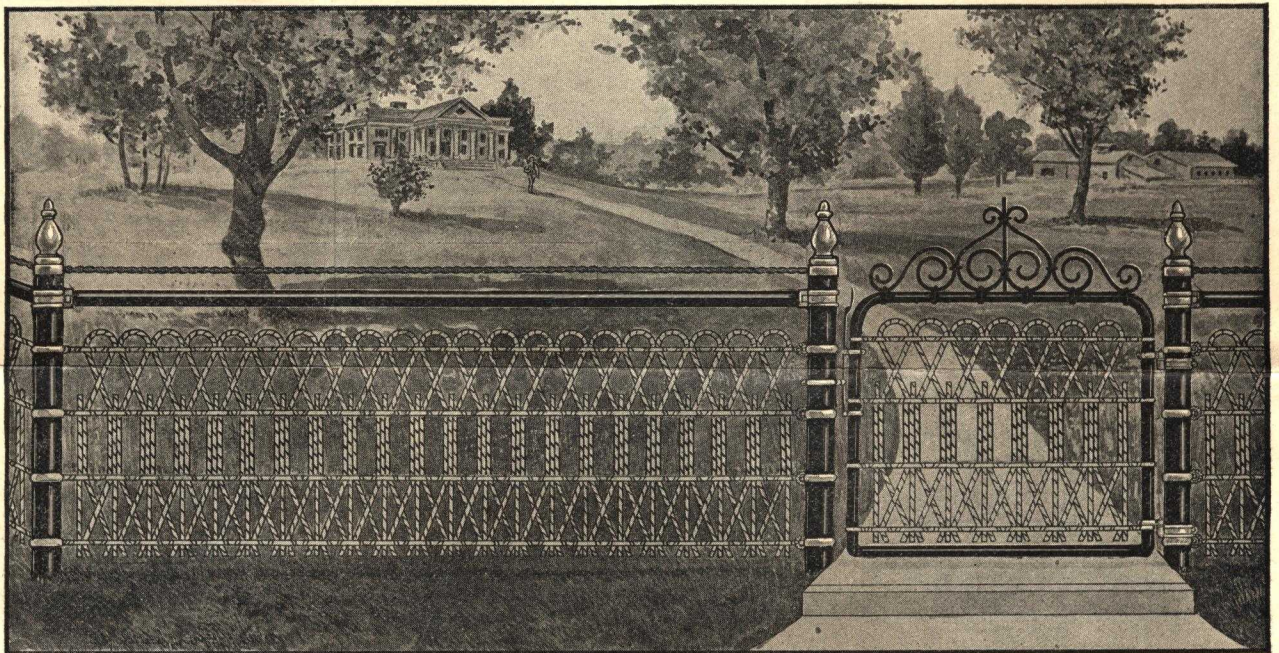

Attracts Attention.

It is a fact worthy of special mention that our fence when erected attracts unusual notice. It has characteristics of its own, so strikingly different from other styles and designs that a lawn adorned by it becomes the object of unusual interest and attention. Proof of this is found in hundreds of unsolicited letters received from our customers which read much like the one which follows:

Cambridge, Ohio, March 28, 1904,

I would like to have another one of your large catalogues on Ornamental Fencing as I am in need of some more fence. I can gladly say I was well pleased with the fence I bought of you. And everyone that sees it says it is very pretty and then they also speak of its great strength. I gladly tell them where I got it, and I hope you may make more sales at this place.

LILLIE ANDERSON.

NO. 4 FENCE, 38 INCHES HIGH, WITH STYLE "B" TRIMMING.

Our Fence Indestructible.

Ornamentation and Usefulness are not the only virtues that can be ascribed to our Fence. It is practically indestructible, because made from steel tubing and heavily galvanized Bessemer steel wire. It should be carefully and substantially erected, and given proper care from year to year; with these precautions it becomes a permanent improvement. On the contrary, a wood fence soon decays, calling for expensive repairs, and eventually complete displacement, long before a fence of our manufacture shows any signs of decadence. As additional evidence of its durability read the following testimonial:

Craig, Mo., May 17, 1904.

I received the Ornamental Fence all right. I finished my fence to-day and will say that it is the nicest and most artistic fence I have ever seen, and I think it will last a lifetime. I thank you for your kindness in paying the freight.

FRED TRAUERNICHT.

Easy to Buy Direct.

The buying of an Ornamental Fence of us is as simple as an every-day transaction at your favorite trading place. Simply mail us a diagram of your fence drawn in straight lines, and showing the exact length of each stretch, the number, location, and width of gates, and we will make your fence in such a precise manner that it may be erected as if you had come to the factory and superintended its construction. Complete directions accompany each shipment and no experienced expert is required. Buying direct is becoming highly satisfactory with a large percent of the people. Responsible manufacturers extend every courtesy and their product is sold under such a liberal guarantee that the matter of acceptance is wholly with the buyer. There is no necessity of paying a large profit to dealers.

ORNAMENTAL FENCING.

Height of Fence.

Our Fabric for Ornamental Fence is made 24, 30, 36, 42 and 48 inches high. If Style "A" or Style "B" Trimming is used the completed fence will be eight inches higher than height of fabric used. This is because the Tubular Steel Top-rail is placed four inches above fabric, and the Malleable Cresting in Style "A" Trimming extends four inches above top-rail, and the Braided Wire Cable in Style "B" Trimming is also placed four inches above top-rail.

Don't be bothered and provoked by trespassers. Surround your home with an Ornamental Fence. Aside from its beauty it suggests an ownership.

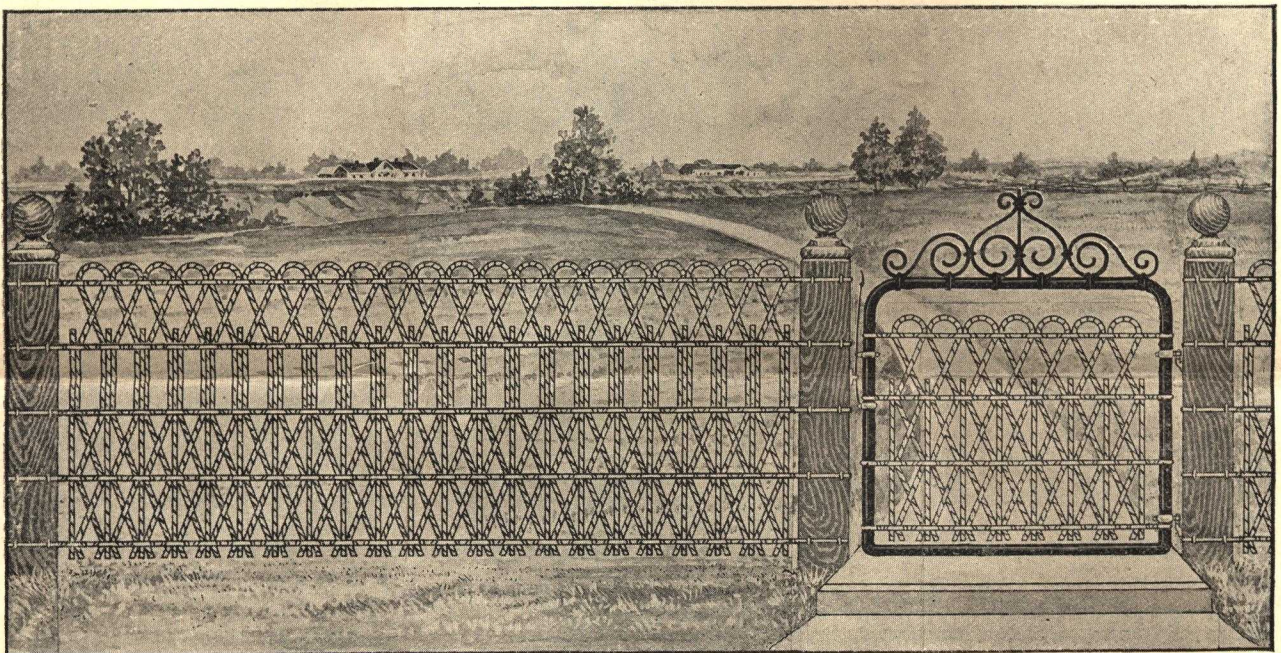

Erecting Over Uneven Surface.

The alternate right and left twists in the cable wire of our Ornate Fabric enables any one to lengthen or shorten any of the cable wires thus allowing the fabric to adjust itself to uneven surfaces.

No Obstruction to View.

Our Ornate Fencing does not obstruct the view of Lawn or shrubbery, yet is complete protection to both. It casts no shade, harbors no vermin, and permits lawn mower to run sufficiently close to make lawn clipping an easy task.

Do not delay until that dreadful tomorrow. Write for our Catalogue today.

NO. 6 FABRIC, 36 INCHES HIGH, ON WOOD POSTS.

Erection of Our Fence.

We often receive letters asking if it requires the services of an expert to erect our fence. Pertaining to this we desire to say that the erection of our fence is so simple that it is not necessary to be more than a mechanic of good judgment. Every thing is cut to accurate measurement and properly labeled. By following the plain, printed directions which accompany every shipment all you need is a few simple tools which are obtainable any where if you do not already have them. That you may know how easily it is done, read the experience of Mr. Homard:

Little Rock, Ark., Sept. 24, 1904.

The fence I ordered of you with "B" trimming arrived in good shape and I have erected it. I lost the directions, but put it up easily without them. Everything fit just as if I had been there to have looked after it myself. Instead of being short I had a few extra pieces to replace should anything have been broken. You folks are certainly very clever to figure out what was wanted by the rough diagram I furnished. Part of the fence was to set in concrete walls and the rest in ground over uneven levels. If anybody from this locality inquires about your fence refer them to me.

T. P. HOMARD.

The Fence That Pleases.

One of the comforts in buying a necessity is the satisfaction of having bought an article of merit, fully worth the money, and one that is as good or better than represented or anticipated. Certainly this feeling of contentment is a pleasure and may be best understood when pitted against the dissatisfaction that follows the purchase of an article that is not only worth less than the money paid, but is not what you had a right to expect. As proof of the Strength, Beauty and Usefulness of our fence, suppose you read the following letter:

Howard, Ohio, Sept. 12, 1904.

The fence you shipped me to Gambier, O., arrived and has been put up and I must say that it is a beauty. It has exceeded my expectations and I think that it will be the means of bringing you other orders for a fence of that kind. Will you please send me a catalogue and your prices of farm fencing. Anything that I can do to increase your trade in this vicinity I will gladly do. We are ever so much pleased with your fencing, also your kind treatment. The hitching post is a dandy.

M. J. WHITWORTH.

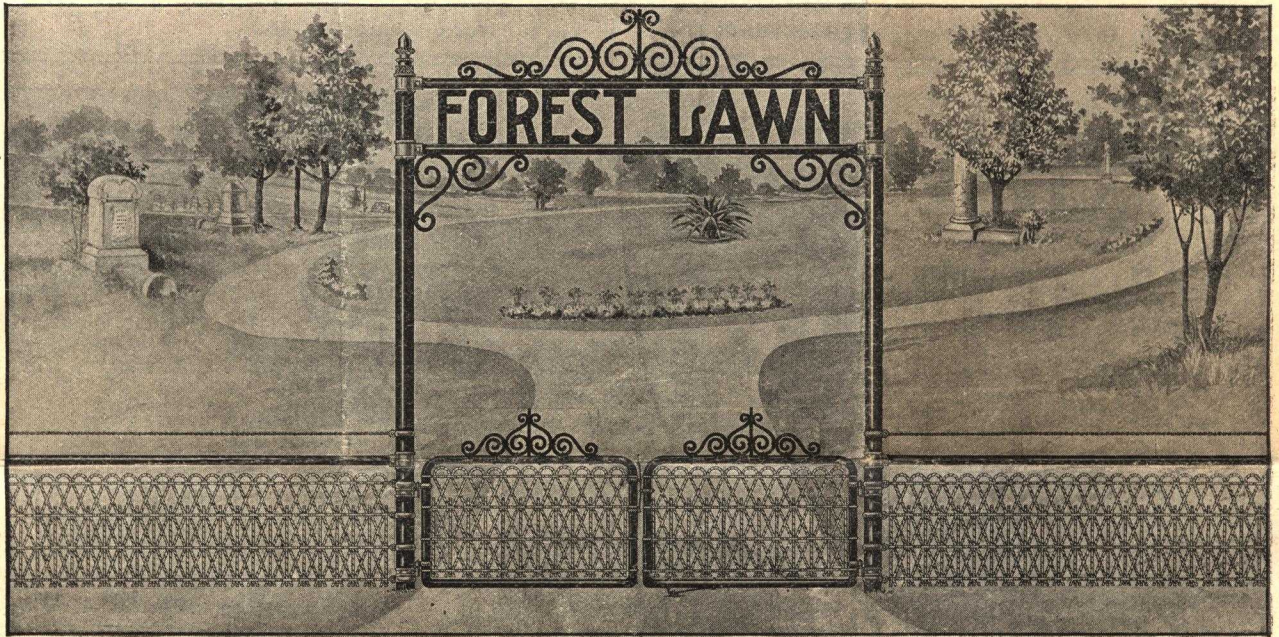

ORNAMENTAL FENCING.

Burial Lot Enclosures.

There is a sense of duty appropriately done when the family burial lot is enclosed by our Ornamental Fence. So little is required that the expense is slight and the knowledge that these sacred grounds are protected against trespass and invasion is well worth the expenditure. Growing flowers are thus protected against thoughtless plucking, and vases or other ornaments are more securely guarded against theft. Our Catalogue gives illustrations and detail.

It Pays to Make the Best.

Our experience has taught us that a good article, honestly made, and sold at a price commensurate with its worth, is the only sure method of winning and sustaining the confidence of the people. It has never been our policy to cater to a trade that wanted a fence so cheap that it is worthless. There are just two extremes: these are "The Best that's Made," and the "Cheapest that's Good." Whenever you cheapen anything below the point that's good, it would be better not to make it.

NO. 10 CEMETERY GATE ARCH.

Cemetery Arches and Fence.

We make a specialty of church and cemetery fencing, gates and arches, and name special prices to individuals or committees contemplating the purchase of fence for these purposes. Send us a diagram giving the measurements of the fence and the number and size of gates desired and we will take pleasure in naming prices that will be extremely low considering the style and quality of fence we furnish. That you may know more of our ability to please we would ask you to read this interesting letter:

Hector, N. Y., October 5, 1904.

The Ornamental Fence consisting of 952 feet of No. 1 fabric with style "A" trimming, including double drive gates and arch, purchased of you this summer for the Logan Cemetery, arrived in due time. We have it erected and every part went together perfectly. It is a durable fence and a great ornament to our cemetery. It is generally admired by all. I had several inquiries as to where it was manufactured, etc. I will say a good word for you whenever an opportunity permits. Thanking you for your kindness, I remain,

Yours truly,

F. C. TICHENOR,

Our New Catalogue.

We have a 32 page Catalogue beautifully illustrated in colors, and devoted exclusively to Ornamental Fence. It fully describes in detail the manner in which our Fence is made, and explains the styles and trimmings used. If you are interested, and will request it, we will take pleasure in mailing it to your address.

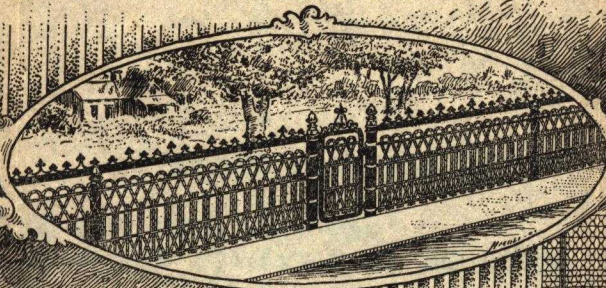

Ready Made Farm Fence.

We make Farm Fence as well as Ornamental. Ours is one of the largest factories in the United States. We own our wire mill and know exactly the kind of wire that goes into our Fence. We are not dependent upon other mills that may be indifferent as to quality of wire. Our line of Farm Fence embraces every style, weight, and height. Write for our 40-page Catalogue. It fully illustrates and describes our complete line, and is mailed free.

Winchester, Indiana, U.S.A.

Feb. 4 1903

Mr. Herman Becker,
Austin, Tex.

Dear Sir:-

When we received your request for our catalogue of Ornamental Fencing we promptly complied by mailing same to you. Later we wrote you several letters setting forth the merits of our Ornamental Fence so forcibly that we hoped to record your order, but for some reason have failed to receive it.

If you have not yet purchased, but still have the matter under advisement, it will be our pleasure to renew the subject and give you additional information if you desire it. Our confidence in our fence is such that we have no apology to offer for aggressively pushing its sale, and believe that your decision to purchase it will result in your complete and unqualified satisfaction.

Previous seasons have been unusually prosperous. New customers have been added and so many have voluntarily expressed their admiration and approval, that we have no hesitancy in saying that we can please you. Our ambition is never gratified until we have supplied our customers with our high grade, beautifully designed Ornamental Fence, and feel rewarded when we have the customer's approval.

If the catalogue we mailed you has been misplaced we will take pleasure in sending you another if you will request it. This Catalogue is valuable to you if you are interested in Ornamental Fence.

Do not hesitate to write us, for it is our desire that you stay with us until every phase of the question is fully discussed and made clear to you. If, however, you have purchased elsewhere, or decided not to purchase and will write us to this effect, we will thank you for the information. It is not our desire to annoy you with letters in which you have no interest, but to serve you whenever you are interested in our product.

Hoping to have the pleasure of an early reply, and assuring you of our interest in the same, we are,

Yours very truly,

Coiled Spring Fence Co.

FARM RAILROAD AND POULTRY

COILED SPRING FENCING

Coiled Spring Fence Co., Winchester, Indiana.

Farm Fencing.

The erection of Fence on the farm is almost as imperative as the planting of seed. The rotation of crops and the maintenance of stock combine to make Farm Fencing an essential part of farm improvement. So long as this is true it is incumbent upon the farm owner to give the matter of fence building the same thoughtful consideration that would be due to any other improvement that calls for a like expenditure of his time and money.

The scarcity of timber has made wire the accepted material for fence building, and since it must be of wire, it is well to remember that strength and durability are prime essentials. We would not mention this were it not the fact that we have earned the reputation of making "The Strongest and Best Fence Made." This is not an exaggerated statement. It is the realization of a desire long ago conceived, and has taken years of toil before we could truthfully proclaim and defend the assertion. To make the Strongest and Best Woven Wire Fence is an achievement worthy of note, and the fact that we sell it direct from the loom to the farmer who needs it, without passing it around through the jobber and dealer, thereby adding three profits instead of one, is a method of selling that we hope will appeal to every farmer who wants the best for the money.

Speaking of Buying.

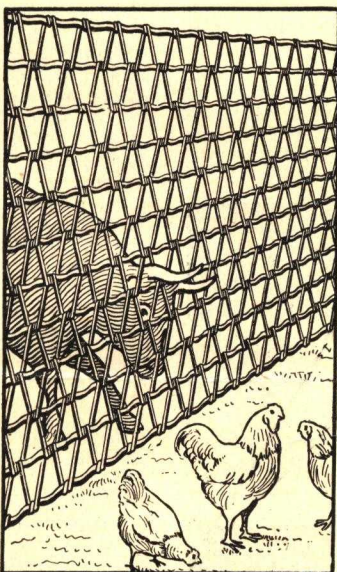

Did you know it was an easy matter to buy direct from the manufacturer? If you have tried it, you know. If you have not tried it, you will not regret a trial. The dealer has nothing superior to offer you. He buys of the manufacturer and adds a good long profit when he sells to you. The manufacturer who sells to the dealer has no special con-

sideration for the consumer. It is doubtful if he exercises the same care and solicitude for the consumer as does the manufacturer who sells direct. The manufacturer who sells to the dealer allows no goods to be returned to him. His argument is that when the goods pass from the dealer to a third party, the consumer, his responsibility ceases. Not so with us. The consumer is our buyer. In consideration of his good will and patronage, we not only furnish him a better fence, but save him money

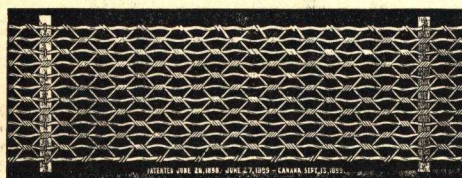

besides. This is not all; we permit him to return his entire shipment at our expense if he is displeased and return every cent of his money. Therefore we repeat, it is easy and safe to buy direct, and you'll get better value for your money.

Concerning Quality.

Alexander Hamilton was a great financier. He was custodian of the nation's finances when the country was embryonic; when a struggle for liberty had depleted the treasury, and the clouds of financial depression hung ominously low and heavy. But history records that Hamilton "smote the rock of public credit, and streams of revenue gushed forth." Apropos to this we would impress you that at a time when every manufacturer was chipping his product here and there, giving less to the consumer and more to his purse, we smote the rock of honest production and miles of superior fence found a market at every door-step, and every rod of it could look you squarely in the face and proclaim, without blushing, a value worth a hundred cents on the dollar. To this constant adherence to high grade material and honest manufacture, fully covered by a sweeping guarantee, we attribute our constantly increasing sales to an ever increasing number of satisfied customers. Will you join us?

THE STRONGEST FENCE MADE.

Farm Fence, Style 100.

This is our standard Coiled Spring Farm Fence. It is not only the Strongest Fence Made, but has a mesh so small that it will turn any kind of stock. The 56-inch height has a breaking strain of 19,448 pounds. We make it in the following heights: 18, 22, 26, 31, 36, 44, 48, 52, 56, and 60 inches.

An Incident in Point.

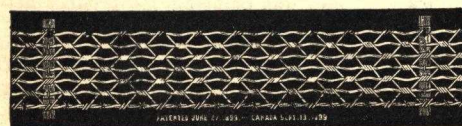

Speaking of strong fences, here's a letter from T. T. Frazier, Durham, N. C., writing under date of March 4, 1904, which is as interesting as it is true:

"About one year ago I bought some of your fence and put it up according to instructions. A few weeks ago one of my horses got loose and it being nearly dark, the horse going full tilt ran squarely against the fence. It pitched him a complete somersault, and he landed about ten feet on the other side. This tremendous strain broke only two of the smaller strands of wire, the others remained firm holding the fence in place. I regard your fence as the best wire fence I have ever seen. I shall want more of it this year."

Hog Fence, Style No. 102.

This fence is just what its name implies, and as a hog fence, answers every purpose effectually. It is identical with Style 103, except one line wire is omitted, and is designed for those wanting a cheap fence. Made 26 inches high only, and fully worth the money asked.

Special Coiled Spring Hog Fence, Style 104.

This is a hummer. You couldn't lay wake o' nights and design a better Hog Fence than Style 104. The mesh wires are woven so closely that it

will turn small pigs, and the barbed bottom selvage wire prevents rooting along fence or creeping under, yet does not injure stock. It is the strongest Hog Fence made, and C. A. Platt, Langford, S. D., likes it so well that he wrote us Feb. 10, 1904, as follows:

"Last season we used some of your hog fencing No. 104 and will say that never a small pig got out of the pasture. We will be needing more of your fencing this coming season."

Special Farm and Sheep Fence, Style 103.

The above is another style of unsurpassed excellence. It is the kind that keeps the sheep secure from dogs or wolves, and confines the hogs, horses, and cattle where they belong. It has six inch mesh with a line wire passing through the center of the diamond, which, in fact, reduces the size of the mesh one-half. Made in heights of 26, 36, 44, 48, and 52 inches. Here's a letter from Mr. F. R. Parks, Hill City, S. D. It is so interesting that we want you to read it. Mr. Parks is willing to swear by what he says;

"Please send me another catalogue at once as I think I can sell some of your fencing. I think you have the best fence on earth, not from what you say about it, for talk is cheap and claims are easily made, but I witnessed as severe a test as ever any fence went through. It was a piece of hog and cattle fence of about 40 rods long. About 200 yards in the center was lower than the rest of the fence; there came a heavy rain and washed all sorts of debris against the fence, washed up the posts and moved the fence about ten feet in the center; on top was logs, brush, wood, etc., which took us most all day to clear. We did not have to take everything off, for the fence came up of its own accord with a heavy load. And after we got it back in place again it was as tight as before it went down. In fact it sang like a banjo string. I would take oath to the above. That is why I think it is the best fence in the world."

Don't pay the dealer a long profit. Send us the order. The farmer, like any other business man, should buy where he can get the best for the least money. This revives the old adage, "A penny saved is two pennys earned."

THE STRONGEST FENCE MADE.

Style No. 100 with two Barbed Wires Above.

The above cut shows our Standard Coiled Spring Fence, Style No. 100, 36 inches high. By adding two barbed wires above the fabric, placing the first 9 inches and the second 18 inches above the fabric, you have a 54-inch high fence that will turn small pigs, hogs and sheep as well as the large stock, at very little expense.

Poultry Fence, Style No. 105, 2-inch Mesh.

Top and bottom wires are No. 10 Coiled Wire. All other line wires are No. 13 Coiled wire. Mesh wire No. 16. This fence will turn horses, cattle, hogs, sheep, rabbits, poultry and dogs.

We sold this fence to Joseph Dusek, Pleasanton, Nebr., and on Feb. 13th, 1904, he wrote his opinion of it as follows:

"Last winter I ordered 70 rods of your No. 105 fencing. I am well satisfied with it, as it is easy to stretch and don't take half as many posts as the other cheap fences. I have hogs on one side of my garden and cattle on the other, but my garden is perfectly safe."

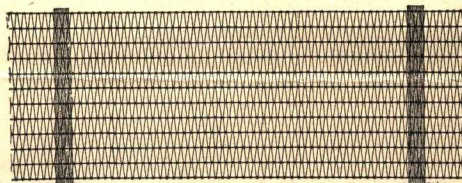

Style No. 107. 4-inch Mesh.

To supply the demand for a nice, neat, strong and durable fence for yard, division and cemetery fencing we have originated our No. 107 which answers the purpose in every particular, at a price that is within the reach of anyone.

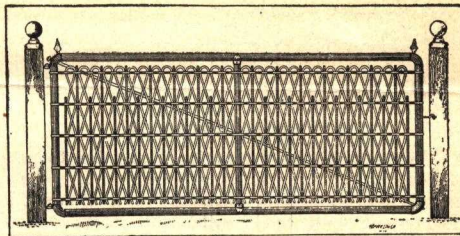

Making Our Own Wire.

There is a distinct advantage accruing from the manufacture of our own wire. We know both the quality of material and the effectiveness of the galvanizing of our own product. To be dependent upon the market generally would subject us to the variable and questionable grades of wire, to the detriment of our product and the consequent injury of our trade. With our own wire mill, modernly equipped, and manned by skilled employes, we are enabled to keep the quality of wire uniformly at high grade, and effectively galvanized, upon which we can place our liberal and unsurpassed guarantee.

Hercules Poultry Fence Style No. 110.

Guaranteed to turn Sheep, Dogs, Wolves, Rabbits and poultry. No top or bottom rail required. Posts can be set from 12 to 30 feet apart with perfect safety. The parallel wires are 4 inches apart. The mesh or diamond is only two inches wide at the farthest point. We use No. 12 wire at top and bottom; balance of parallel wires are No. 16 and mesh wires No. 18. Hercules Poultry Fencing, 59 inches high, has a breaking strain of 9,152 pounds, and is guaranteed not to sag or buckle. Regular size rolls contain 5, 10, 20, 30 and 40 rods, but we can make any number of rods desired over 5 rods in length.

Farm Gates.

Our Farm Gates are made even stronger than is really exacted, that they may have reserve strength to insure service and long life. The heavy tubular steel Frame is supported by vertical brace in center, and solidly braced diagonally by twisted cable. The gate frame is then reinforced by heavy wire fabric, making it proof against poultry and small stock. Made in any height or width desired.

THE STRONGEST FENCE MADE.

Our Catalogue.

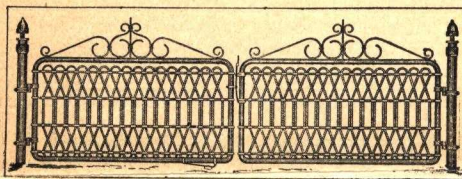

We have a 40-page Catalogue devoted to the illustration and description of Farm Fence which we will be glad to mail, free, to any address upon request. If you contemplate the purchase of fence, write for it; it contains information useful to you.

Club With Your Neighbors.

We give a very generous quantity discount, in addition to our cash with the order discount. It will pay you to join with your neighbors and send us an order for the total. The quantity and cash discounts represent a nice saving. Our guarantee will apply to each individual buyer.

Our Guarantee.

Our liberal guarantee, under which every rod of our Coiled Spring Fence is sold, is worthy of special notice. It is evident that none but a fence of superior merit could be manufactured and sold under its terms. We not only invite examination of any shipment at the railroad station, but permit the erection of our fence, on thirty days free trial. If at any time within 30 days from receipt of your shipment you do not find your purchase fully up to the standard of excellence claimed for it, or if you are displeased in any way, you are at liberty to return the fence to us at our expense, and every cent of your money will be promptly refunded. This proposition is made and extended in good faith; and our Fence is made so good that thousands of rods are sold under these conditions without the shadow of complaint.

Ornamental Gates.

We make Single or Double Gates. Ten-foot Single Gates have one vertical brace in center. The 12 and 14-foot single gates have two vertical supports. They are strong and ornamental. Shipped fitted with hinges and latch. Made any height or width desired.

If in need of Ornamental Fence, write for our Catalogue. It is replete with illustrations, showing many designs for Lawn, Park or Cemetery, and the prices are moderate. Mailed free upon request.

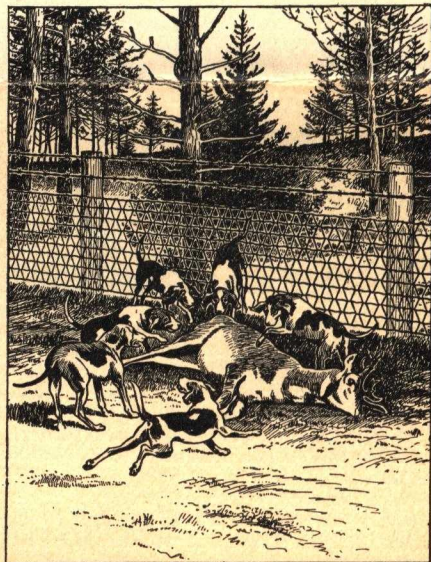

There is no better method of buying fence than direct from the loom to the farmer. It is money thrown away to allow the jobber and the dealer to add a couple of profits.

A Deer Broke its Neck.

Camp P. O., Berkley Co., S. C., Jan. 15, 1904.
Coiled Spring Fence Company,
Winchester, Indiana.

Gentlemen: It affords me much pleasure to report to you that the wire fence, Style No. 100, 6-inch mesh, 36 inches high, that I purchased from you in Sept., 1903, has given entire satisfaction.

The strength of your wire was fully tested on the 2nd inst. at my place, a deer that was pursued by dogs, ran up to the fence and struck it with such force that he broke his neck.

My fence is constructed of your wire as described above, with two barbed wires above, with good hewed posts about 12 feet apart and the wire is stretched tight with your stretcher.

I examined the wire after the deer fell, and could not see where he made any impression on the fence by hitting it such a blow. It was a young buck of about 75 pounds weight, with horns just coming out.

Anyone that I know wanting good wire netting for a fence that will even turn deer, I can certainly recommend your fence. It was such a remarkable thing for a deer to break its neck by striking a wire fence that I sent an account of it to our county paper.

Yours truly,
FRANCIS MARION.

If you buy our fence and you don't like it, you get your money back.
